

Risk

A pesar de pasar por la planta de tratamiento, el agua potable puede contener pequeñas cantidades de PFAS, que se acumulan en el cuerpo con el tiempo. ¡Solo usa una jarra con un filtro certificado que elimine PFAS y tendrás agua segura y de buen sabor!

[translation: Even after going through the treatment plant, drinking water can contain small amounts of PFAS, which accumulate in the body over time. Just use a pitcher with a certified filter that removes PFAS, and you'll have safe, great-tasting water!]
